

## Other Bleeding Disorders Products

| Manufacturer            | Product   | Type  | Indication  |
|-------------------------|---|---|---|
| Akorn                   | Amicar<br>(brand name for epsilon aminocaproic acid) Available as injection, oral solution or tablets | Antifibrinolytic                              | Helps retain blood clots by inhibiting the action of enzymes that break down clots (fibrinolysis). (Antifibrinolytics do not help form clots.) Useful for mucous membrane bleeds such as in the mouth or nose where clots are rapidly broken down in people with <b>hemophilia A or B</b> . Short term use. |
| CSL Behring             | Stimate<br>(desmopressin nasal spray)   | Synthetic form of natural hormone vasopressin | <b>Hemophilia A with factor VIII levels greater than 5% and VWD Type 1 VWD</b> , not for infants. Increases circulating levels of FVIII and VWF by releasing stores from endothelial cells lining blood vessels. Short term use.  |
| Ferring Pharmaceuticals | DDAVP Injection<br>(desmopressin acetate)   | Synthetic form of natural hormone vasopressin | <b>Hemophilia A with factor VIII levels greater than 5% and VWD Type 1</b> , for ages greater than 3 months. Increases circulating levels of FVIII and VWF by releasing stores from endothelial cells lining blood vessels. Short term use.   |
| Ferring Pharmaceuticals | Lysteda<br>(brand name for tranexamic acid tablets)   | Antifibrinolytic                              | Helps retain blood clots by inhibiting the action of enzymes that break down clots (fibrinolysis). <b>Indicated for heavy menstrual bleeding in women with hemophilia A or B or VWD</b> . Short term use.   |
| Pfizer                  | Cyklokapron<br>Injection<br>(brand name for tranexamic acid)  | Antifibrinolytic                              | Helps retain blood clots by inhibiting the action of enzymes that break down clots (fibrinolysis). <b>Indicated for tooth extraction in individuals with hemophilia A or B</b> . Ten times more potent than Amicar. Short term use.   |
